

## Gas pressure regulator GDJ

### TECHNICAL INFORMATION

- Universal pressure regulator for gaseous media
- Design with inlet pressure compensation diaphragm ensures high control accuracy
- Internal impulse
- Feedforwarding the furnace chamber pressure is possible
- No breather line required
- EU certified

---

## 1 Application

*GDJ 25*

The spring-loaded gas pressure regulator GDJ with inlet pressure compensation diaphragm and zero shut-off serves to maintain the set outlet pressure constant despite changing gas flow rates and inlet pressures in gas pipelines. Thanks to an additional safety diaphragm, no breather line is required.

For controlling the pressure of the gas and air supply to gas burners and gas appliances in industry and the heating sector.

### 1.1 Application examples

*Bogie hearth furnace*

*Roller hearth furnace*

*Intermittent shuttle kiln*

## 2 Certification

Certificates – see [www.docuthek.com](http://www.docuthek.com)

### EU certified

- (EU) 2016/426 (GAR) – Gas Appliances Regulation
- EN 88-1:2011

### Eurasian Customs Union

The product GDJ meets the technical specifications of the Eurasian Customs Union.

### 3 Function

Gas pressure regulator GDJ is open when no pressure is applied.

The gas supply is opened slowly and the gas flows via the valve seat to the pressure regulator outlet. The outlet pressure is applied to the working diaphragm from below via the impulse line. As soon as the outlet pressure corresponds to the set spring force, the working diaphragm lifts and the valve disc connected to it reduces the flow rate.

If the outlet pressure drops, e.g. due to switching on a consumer, the valve disc is opened further and the outlet pressure increases again.

If the outlet pressure increases, e.g. due to reduced consumption, the valve disc is closed further and the outlet pressure decreases again. Thus, the outlet pressure is maintained constant despite changing gas flow rates.

If consumption is stopped, the valve disc closes completely (zero shut-off).

Fluctuations in the inlet pressure are compensated by the inlet pressure compensation diaphragm.

For measuring the inlet pressure, the optional pressure test nipple at the inlet can be used.

## 4 Flow rate

- 1 = natural gas ( $\rho = 0.80 \text{ kg/m}^3$ )
- 2 = town gas ( $\rho = 0.58 \text{ kg/m}^3$ )
- 3 = propane ( $\rho = 2.01 \text{ kg/m}^3$ )
- 4 = air ( $\rho = 1.29 \text{ kg/m}^3$ )

### Example

Gas type: natural gas,  
flow rate  $Q = 70 \text{ m}^3/\text{h}$  (2613 SCFH),

inlet pressure  $p_u = 70 \text{ mbar}$  (28.1 "WC),  
outlet pressure  $p_d = 20 \text{ mbar}$  (8.0 "WC),  
pressure loss  $\Delta p = p_u - p_d = 50 \text{ mbar}$  (20.1 "WC).

The result is intersection P1. The next largest nominal size is selected: GDJ 40.

At a pressure loss of  $\Delta p = 50 \text{ mbar}$  (20.1 "WC), the max. flow rate is  $Q_{\text{max.}}: 105 \text{ m}^3/\text{h}$  (3920 SCFH).

## Flow rate

---

The min. flow rate  $Q_{\min.}$  is derived from  $Q_{\min.} = Q_{\max.} \times 10\% = 10,5 \text{ m}^3/\text{h}$  (392 SCFH).

### 4.1 Calculating the nominal size

A web app selecting the correct product is available at [www.adlatus.org](http://www.adlatus.org).

## 5 Selection

### 5.1 Selection table

Option	GDJ	GDJ..T
DN	15, 20, 25, 40, 50	15, 20, 25, 40, 50
Pipe connection	R	N
Inlet pressure	04	04
Pressure measuring point	-0, -4	-0
For air only (without approval)	L	L

#### Order example

GDJ 40R04-4

### 5.2 ProFi

A web app selecting the correct product is available at [www.adlatus.org](http://www.adlatus.org).

### 5.3 Type code

#### 5.3.1 GDJ

<b>GDJ</b>	Pressure regulator for gas
<b>15-50</b>	Nominal size
<b>R</b>	Rp internal thread
<b>04</b>	$p_u$ max. 400 mbar
<b>-0</b>	No pressure test point
<b>-4</b>	Pressure test point at the inlet
<b>L</b>	Only for air (without approval)
<b>Z</b>	Special outlet pressure range

\* Not for T-product.

#### 5.3.2 GDJ..T

<b>GDJ</b>	Pressure regulator for gas
<b>15-50</b>	Nominal size
<b>T</b>	T-product
<b>N</b>	NPT internal thread
<b>04</b>	$p_u$ max. 5 psig (350 mbar)
<b>-0</b>	No pressure test point
<b>L</b>	Only for air
<b>Z</b>	Special outlet pressure range

## 6 Project planning information

### 6.1 Installation

Installation position: spring dome pointing vertically upwards or to the side, not upside down.

The gas pressure regulator GDJ must not be in contact with masonry. Minimum clearance 20 mm (0.8 inch). Ensure that there is sufficient space for changing the spring.

Do not store or install the unit in the open air.

Sealing material and dirt, e.g. thread cuttings, must not be allowed to get into the regulator housing.

Install a filter (GFK) upstream of every system.

### 6.2 Installation to EN 746-2

In accordance with EN 746-2, a safety shut-off valve upstream of the gas pressure regulator and a safety relief valve are required for gas pressure control systems.

These valves are not required if the highest possible operating pressure upstream of the regulator cannot exceed the maximum allowable operating pressure of the downstream devices.

### 6.3 Vent restrictor to ANSI/CSA

The vent restrictor complies with the requirements of ANSI Z21.18a-2010 and CSA6.3a-2010.

It is included with every GDJ..T T-product and screwed into the breather orifice in place of the vent screen.

In normal operation, the vent restrictor ensures venting as does the vent screen. In the event of a sudden malfunction, a ball inside the vent restrictor is pressed onto the restrictor outlet and blocks the escaping gas.

Pressure		Flow rate			
mbar	psig	Natural gas		Air	
		m <sup>3</sup> /h	ft <sup>3</sup> /h	m <sup>3</sup> /h	ft <sup>3</sup> /h
34.5	0.5	0.028	0.995	0.036	1.284
69	1.0	0.028	0.995	0.036	1.284
103	1.5	0.031	1.085	0.040	1.401
138	2.0	0.041	1.447	0.053	1.869
345	5.0	< 0.056	< 2.0	0.071	< 2.5

The vent restrictor is designed so that the flow rate is between 1 and 2.5 ft<sup>3</sup>/h (natural gas with a relative density of 0.64) in the event of a malfunction.

### 6.4 Feedforwarding the furnace chamber pressure

If furnace pressure varies, a combustion chamber control line can be connected to the breather orifice (GDJ..R = Rp ¼, GDJ..N = NPT ¼) in place of the vent screen in order to maintain a constant burner capacity.

This application is only permitted for a maximum furnace chamber pressure between 0 and +100 mbar and for slow pressure changes.

## 7 Technical data

Gas types: natural gas, town gas, LPG (gaseous) and biogas (max. 0.02 %-by-vol. H<sub>2</sub>S), GDJ..L also for air. The medium must be dry in all temperature conditions and must not contain condensate.

Inlet pressure range up to 400 mbar (5.8 psig).

Outlet pressure ranges:

GDJ 15: 2 to 55 mbar (0.8 to 22 "WC),

GDJ 20 – 40: 5 to 160 mbar (2 to 64 "WC),

GDJ 50: 5 to 100 mbar (2 to 40 "WC).

The regulators are preset at the factory to 20 mbar.

Turndown: 10:1.

Ambient temperature: -20 to +60°C (-4 to +140°F).

No condensation permitted.

Long-term use in the upper ambient temperature range accelerates the ageing of the elastomer materials and reduces the service life.

Storage temperature: -20 to +40°C (-4 to +104°F).

Valve housing: aluminium.

Valve seat: aluminium.

Valve disc: plastic.

Valve disc seal: NBR.

Diaphragms: NBR.

When used for air: special version.

Internal thread: Rp to ISO 7-1.
